

1 **Abstract**

2

3 An improved driver assembly for a panel loudspeaker

4 includes a retaining element for locating the voice

5 coil with respect to the magnet assembly and

6 forming a surface for removable attachment of the

7 driving assembly to a radiating member. In a

8 preferred embodiment, the retaining element is

9 injection moulded from a hydrogel material with

10 Shore A hardness in the range 0 to 20.
